- Can we teach data systems to talk to one another? Leverage more information from the same amount of data?
- How can we integrate school and district data models with district-to-state and state-to-national reporting needs?
- What's new in data standards, and why are they important for my (schools, districts, state)?
- Accountability has been significantly redefined under No Child Left Behind.
 What are some "best practices" for collecting, maintaining, and reporting accountability data?

The 2003 MIS Conference is a concentrated three days of information about best practices, innovative ideas, current issues, and practical how-to advice about management information systems for K-12 education. Co-sponsored by the Utah State Office of Education and the U.S. Department of Education's National Center for Education Statistics (NCES), the MIS Conference brings together the people who work with information collection, management, transmittal, and reporting in school districts and state education agencies.

Over the past 16 years, a state education agency has partnered annually with NCES to bring local, state, and national data professionals together to learn from one another in an informal setting. This year the MIS Conference will offer more than 60 presentations, demonstrations, and workshops conducted by practitioners from K-12 information systems.

You are invited to attend the 2003 MIS Conference in Salt Lake City, Utah, and to submit a proposal for presenting a session that will add to the conference's interest and usefulness.

Topics are invited from all sources, but the major focus will be on data models and data standards, with an emphasis on accountability.
